CHAPTER V

CONCLUSION AND SUGGESTIONS
CHAPTER V
CONCLUSION AND SUGGESTION

In the last chapter, the writer would like to make a conclusion and suggestion about this thesis. They are elaborated below.

5.1 Conclusion

The writer can conclude that in constructing materials, it is necessary to use an approach. In this case, the writer uses the approach stated by Walter Dick and Lou Carey. This approach consists of 10 steps as follows:

1. Needs analysis and materials evaluation.
2. Identifying General Instructional Objectives.
3. Implementing a teaching analysis.
4. Identifying student behaviors and characteristics.
5. Writing Specific Instructional Objectives.
6. Developing criterion-referenced tests.
7. Developing a teaching strategy.
8. Developing teaching materials.
10. Revising teaching materials.

Before going to the final version of the materials, the writer does the try out of one of the materials to the Architecture students. Then, the writer makes a necessary revision. Finally, the writer can go to the
final version of the materials which can be seen in the appendix.

5.2 Suggestion

The writer would like to suggest that all of the materials that the writer constructs need to be tried out for one semester in a university of Architecture Department to know whether the materials are really suitable with the need of the students or not.

The writer suggests that because the writer only does the try out of one material only. Therefore, the accuracy of all the materials is not known yet.
